# Connectivity Ethernet

## High capacity, low latency connectivity

Ethernet Leased Lines offer guaranteed performance with simultaneous and symmetrical bandwidth.

Our Ethernet Leased Lines are available as Internet Access (DIA) products, with the flexibility of having managed Customer Premises Equipment (CPE) and services. Internet Acces Ethernet offers an always on internet connection providing high performance, cost effective, dedicated access for organisations of any size backed up by leading service level agreements (SLAs) and Service Level Guarantees (SLGs).

We also offer Ethernet Point to Point, linking two customer premises together, or a customer site to a data centre, outside the coverage of our network or where internet access is not required by the customer.

### Key Features:

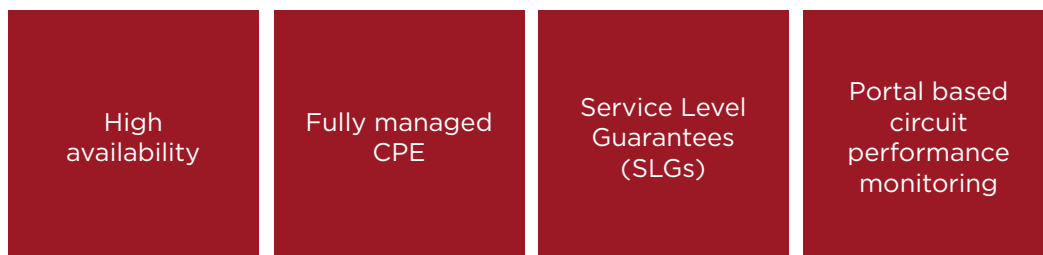

Guaranteed symmetrical bandwidth	Ultra-low latency	Range of solutions to suit any business
Guaranteed SLAs	Choice of the UK's leading carriers	High availability
Unlimited usage and free static IPs	CPE monitoring included	24/7/365 support

## Internet Access Ethernet – Managed Solution

Our Internet Access Ethernet product is available across three technologies: Full Fibre Ethernet, Ethernet over FTTC (EoFTTC/GEA) and Ethernet First Mile (EFM).

### Key benefits:

## Available Ethernet technologies

### Full Fibre Ethernet

- Delivered using a dedicated fibre for the tail between the Point of Presence (POP) and end user site, it is capable of dealing with large numbers of users and any high bandwidth cloud based application.
- Up to 1Gbps simultaneous download/upload bandwidth.

### Ethernet Over FTTC/GEA

- High velocity, hybrid solution – giving you Ethernet SLGs with the cost benefits of FTTC.
- Up to 19Mbps download bandwidth.

### Ethernet First Mile (EFM)

- Provides a guaranteed high performance dedicated service, particularly useful where fibre is not available.
- Up to 35Mbps download/upload bandwidth.

### Point to Point Ethernet

- Point to Point Ethernet is a wires only product used to connect two locations using a fibre carrier Ethernet solution (this can be two customer premises or a premises to a data centre).
- P2P Ethernet is the most secure way to transfer your data as it does not utilise any public access networks.
