# Connectivity Single Order Generic Ethernet Access (SOGEA)

## Single Order Connectivity is here.

In the biggest change to telecommunications in 30 years, PSTN and ISDN services will be switched off by December 2025 and a stop-sell of these services by 2023, meaning connectivity will no longer be supported by traditional copper telephone lines.

The future is data-only, Single Order broadband.

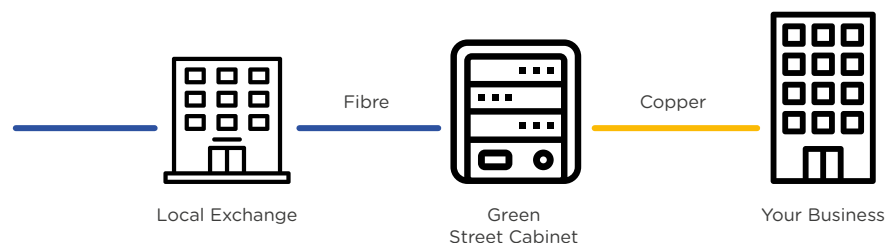

### What is SOGEA

- A data-only broadband solution that is provisioned on a single order.
- Does not include voice services or a phone line.
- Voice becomes an Over The Top (OTT) service like any other data service.
- Based on the current FTTC technology, using a combination of copper and fibre technology, without requiring a traditional telephony connection.

The arrival of SOGEA transforms the way businesses work. Offering download speeds of up to 80Mbps, SOGEA provides faster, more reliable connectivity than ADSL, meaning you can do more online, without worrying about buffering.

### SOGEA Infrastructure

SOGEA technology is based on the current FTTC set up. Fibre technology is used from the local Exchange to the green street cabinet and then copper from the cabinet to the premises.

Available to  
over 28 million  
UK premises

Download  
speeds of up  
to 80Mbps and  
upload speeds  
of 20Mbps

Simple  
migration  
journeys  
with minimal  
downtime

Low and  
medium  
bandwidths  
available

Future proof  
for the PSTN  
withdrawal –  
stop sell for  
WLR is 2023,  
switch off 2025

Simplified  
ordering  
and support  
experience
